

Product: Can-Am X3 Reverse Lights/Housings and Switch

Disclaimer: When wiring it is suggested to disconnect the battery terminals

Instructions:

Switch Installation

• Remove the bolt from the shifter linkage on the transmission and replace it with the supplied bolt. The supplied bolt is a little longer than the OEM bolt. Do not remove the linkage itself because if not put on correctly the machine will not shift into the gears properly.

• Slide the switch to the bottom of the bracket to have the best access to the mounting bolt holes.

Thank you for your purchase.

• Remove the top two bolts from the transmission shown in the picture below.

• The two holes in the switch bracket will line up and mount to the holes in the transmission where the bolts were removed. Reuse the bolts that were taken out to attach the bracket to the transmission. These should be tightened down to 90in/lbs.

- If the bolt seems like it is to long and binding on the switch while shifting into reverse add the supplied washers to the bolt head side of the shifter linkage bolt.

Wiring Installation

• Locate the tail light plug on the passenger side rear firewall and separate the two plugs. Picture below.

Thank you for your purchase.

- Plug the ends of the OEM style plug into each end of the OEM tail light plugs.
- Run the end labeled trans switch down along the wiring and vent tube to the switch on the transmission that was installed in previous steps.
- Use the supplied plug end for the output power and ground to your accessory.
- Test the function of system and once everything is working tie up any loose wires with the supplied zip ties and re-attach any panels that were removed for the installation.

Thank you for your purchase.
